Re: "Mouth screw"

Please find enclosed the "mond skroef" that you saved my life with. I still can't believe that I nearly went for a jaw joint replacement in Nelspruit. For 15 months, I've been in excruciating pain until you discovered the scar tissue growth of previous operations, that caused all the drama.

I am happy to say that I am still chewing for the Springbok rugby team, without any pain at all. Thank you once again for listening and for trying your utmost to avoid another jaw operation.

God bless and regards,

Juanita Kruger
